

### Coming in 2023: Changes in Publication Fees for Open Access Articles

Beginning in January 2023, ASPET will end page charges for new submissions from all authors who opt-in for Open Access.

ASPET members will continue to pay the same Article Processing Charges (APC) to publish their work under a [Creative Commons Attribution license](#) (CC BY; \$3,000) or a [Creative Commons Attribution Noncommercial license](#) (CC BY-NC; \$2,000), with page charges eliminated.

Page charges will also be eliminated for non-members, whose APCs will be \$3,500 for CC BY and \$2,500 for CC BY-NC.

Authors who do not choose Open Access will continue to pay page charges.

An Open Access License Agreement should be digitally signed in place of a Copyright Transfer Agreement. The form is provided in the manuscript submission system. Open Access articles will not appear online until the Open Access fee has been paid through the Copyright Clearance Center's Rightslink for Scientific Communication (RLSC) system. Some funders require authors to utilize an Open Access option when it is available. **Please know your funder's requirements prior to submission.**

ASPET does not offer refunds for Open Access fees. If an error related to Open Access is identified in a published article (e.g., missing Creative Commons license, article not freely accessible, or article not deposited with PubMed Central), ASPET will correct the error.

Below are links to each journal's Open Access policy:

- [Drug Metabolism and Disposition](#)
- [The Journal of Pharmacology and Experimental Therapeutics](#)
- [Molecular Pharmacology](#)
- [Pharmacological Reviews](#)
